Subject: RE: Proposed acreage limitation and rate reduction for captan
Attachments: Captan Final PID w Signature.pdf

Hi Jaclyn,

We don't really have one single table. The PID appendices show some of the risk estimates that HED provided for different application rates and acreages. See appendix F, starting on page 71. These are based on spreadsheets developed by HED's Briana Lee, the captan ORE assessor. She plugged various variables into her spreadsheets to allow us to see the impact on risks. We sat down with her (and BEAD team members) on a number of occasions to see what would happen if we changed variables. This work was critical to the development of various mitigation options.

Just as an FYI, you may want to ask your HED team to explicitly show the impact of rate reductions and acreage limitations in any revised assessments. For some reason, HED prefers to present only the maximum label rates and default acreages. I believe this is from the standard template, which is great for initial screening but not so much for scoping out the impacts of proposed mitigation.

Thanks and good luck!

Christina

Subject: Proposed acreage limitation and rate reduction for captan

Hi Christina,

Can you please share with us the table with the proposed acreage limitations and rate reductions for captan? We are possibly doing something similar for ziram for vineyard/orchard uses and HED asked for the proposed table(s) to get them visualize this approach.

Thank you,
Jaclyn
